SUMMARY

Software engineer and 2026 B.Tech graduate with hands-on experience building full-stack applications with React, Node.js, Express and SQL databases, along with Python backends and LLM-powered workflows. Experienced in REST APIs, authentication, payment integration, automated testing, and Git-based collaboration.

SCHOLASTIC RECORD

Year	Degree	Institute	CGPA/%	Remark
2026	B.Tech (Electronics and Telecommunication)	MIT Academy of Engineering, Pune	8.98	Distinction
2022	12th (Maharashtra State Board)	Bhartiya Mahavidyalaya, Amravati	81%	Distinction
2020	10th (Maharashtra State Board)	Golden Kids English School, Amravati	85%	Distinction

SKILLS

- **Languages & Frameworks:** Python, JavaScript, TypeScript, FastAPI, React.js, Node.js, Express.js
- **Databases & APIs:** PostgreSQL, MySQL, MongoDB, SQL, REST APIs, SQLAlchemy, Pydantic
- **Tools, Testing & AI:** Pytest, Postman, Git, GitHub, Docker, Groq API, LLM Integration

INTERNSHIP

PulseOn-EV — **Technical Intern - Web & Mobile Development** — **Jun 2025 - Aug 2025** (2 MONTHS)
Project Details:

- Built backend REST APIs for a cross-platform EV service platform handling bookings and authentication.
- Simplified booking user flows to reduce incorrect service requests by ~30%.
- Integrated Razorpay payment system and Google Maps-based real-time tracking for service dispatch.
- Used GitHub in a **3-member team** for **code reviews**, **PRs**, and **conflict resolution**.
- Built the cross-platform mobile app in React Native with Firebase, connected to the backend REST APIs.
- Tested and debugged REST API endpoints using Postman before integration.

Campus Credentials — **Full Stack Development Intern** — **Jun 2024 - Aug 2024** (2 MONTHS)
Project Details:

- **Engineered** a full-stack blog platform using **React**, **Node.js** and **Express.js**.
- **Designed** a secure **RESTful API** featuring **JWT** and **Bcrypt** for user authentication.
- **Built** an Admin Dashboard with **Role-Based Access Control (RBAC)** for content moderation.

PROJECTS & OPEN-SOURCE CONTRIBUTIONS

EVE Healthcare API — GitHub — **Mar 2026**
Tech: FastAPI, PostgreSQL, SQLAlchemy, Pytest

- Built a FastAPI backend for diagnostic test bookings with PostgreSQL, SQLAlchemy 2.0, Pydantic v2 and Alembic migrations.
- Implemented JWT authentication, role-based admin access, booking lifecycle management, and user-level resource authorization.
- Developed transactional payment workflows with HMAC-SHA256 webhook verification and idempotent event processing.
- Configured automated tests using Pytest, including support for a separate integration-test database.

TalentMatch AI - AI-Powered Resume - Job Matching Application — GitHub — **Mar 2026**
Tech: Python, Streamlit, Groq API, Pydantic, Pytest

- Built and deployed a Python application that extracts PDF/DOCX content, structures candidate data, and evaluates resumes against job descriptions using LLM APIs.
- Implemented schema validation, per-file error handling, CSV export, and reusable backend logic separated from the UI.
- Added automated tests using Pytest with mocked API interactions.

Resume Builder Web Application — GitHub — **Oct 2024**
Tech: React.js, Node.js, Express.js, MySQL

- Built a full-stack resume builder with dynamic multi-step forms, real-time resume preview, and authenticated user workflows.
- Developed REST APIs and CRUD operations with protected routes to manage resume data.
- Designed a normalized MySQL schema with 8+ interconnected tables, reducing resume creation time by approximately 80%.

Open-Source Contributor — GitHub — **Feb 2026**
Calendar Wallpaper Generator | Open Source

- Refactored duplicated font logic, removing 150+ lines and improving maintainability.
- Integrated Groq AI streaming and contributed to a project with 300+ downloads.

AI Ad Mapping & Category Classification System — GitHub — **Mar 2026**
Tech: n8n, Groq LLaMA-3.1, Google Sheets, Looker Studio

- Designed & implemented a backend pipeline to classify ad creatives into structured attributes using LLM inference.
- Built API-driven data ingestion and transformation layer to process campaign data from multiple sources (Google Ads, Meta Ads)
- Implemented retry logic, rate limiting, and batching to handle API constraints and ensure system reliability under load
- Reduced manual tagging effort by 80% and improved downstream analytics consistency across campaigns

CERTIFICATIONS & ACHIEVEMENTS

- AWS Certified Cloud Practitioner — *May 2026*
- Attained 17th rank in the State-Level Coding Wars, PCCOE Spectrum — *Aug 2023*
